Alexander Jando

Hamilton, ON | West Vancouver, BC

alex@jando.live | +1 (236) 865-5560 | jando.live | github.com/Alex-Jando | alex-jando

Education

McMaster University **Expected 2030**
Mechatronics Engineering and Management (B.Eng.Mgt.) *Hamilton, ON*

Technical Skills

Programming: Python, C/C++, Java, JavaScript/TypeScript, MATLAB, SQL
Testing & Software: Pytest, Playwright, Jenkins, React, Next.js, Flask, OpenCV
Hardware & Embedded: ESP32, Arduino, Raspberry Pi, Jetson Nano, sensors, motor control, basic wiring
CAD & Manufacturing: Fusion 360, Autodesk Inventor, Onshape, 3D printing, laser cutting
Engineering Tools: Git, Bitbucket, Linux, Jira, Confluence

Experience

Corinex Communications **May 2026 – Present**
Hardware R&D Engineering Co-op / Software QA Engineering Co-op *Vancouver, BC*

- Transitioned from Software QA to Hardware R&D after six weeks, expanding from test automation into mechanical design, prototyping, and workshop development.
- Developed automated tests with Python, Pytest, and Playwright, integrated them into Jenkins CI, and tracked defects using Bitbucket and Jira.
- Designed production and workshop components in Fusion 360, then manufactured and iterated prototypes using 3D printing.
- Contributed to workshop layout, ventilation-system development, equipment installation, and basic electrical wiring.

McMaster University **September 2025 – December 2025**
Project Manager & Software Lead, Robotic Order-Packing System (ENG 1P13) *Hamilton, ON*

- Managed a five-person team building an automated warehouse order-packing system on a Q-Arm robot, owning scope, timelines, and task allocation across mechanical and software workstreams.
- Led development of modular Python control software for product lookup, arm motion sequencing, packing operations, and operation logging.
- Designed a 4:1 geared rack-and-pinion gripper in Autodesk Inventor within a 100 g end-effector limit, iterating through 3D-printed prototypes to resolve gear meshing, tolerance, and rigidity failures.

Hypercharge Canada **June 2023 – August 2023**
EV Charger Technician Intern *Vancouver, BC*

- Assembled, configured, and tested 100+ EV charging units involving embedded firmware and power electronics.
- Diagnosed hardware faults, replaced internal components, and performed electrical checks and quality control.

Projects

Accessible Macro Pad *Project Coordinator & Sole Hardware Designer*
jando.live/projects/accessible-macro-pad ↗

- Designed an accessible Bluetooth device with three large physical controls and six configurable mobile actions.
- Created the enclosure, keycaps, and ESP32 resistor-ladder circuit; contributed to firmware and the React Native app.
- Rebuilt failed connections and calibrated ADC thresholds until all three inputs triggered reliably.

FIRA RoboWorld Cup Autonomous Race Car *1st Nationally, 2nd Internationally*

- Built an autonomous race car using Raspberry Pi, Arduino, Python, and OpenCV.
- Implemented vision-based edge detection and PID steering, then tuned the integrated system for competition.

NoNotes, AI-Powered Note-Taking Platform *1st Place, HappyHacks II*

- Led backend development for a Flask and SQLite platform that converted lectures into searchable notes.
- Integrated speech-to-text, NLTK processing, and automated summarization during a 48-hour hackathon.

Awards & Certifications

1st Place, FIRA RoboWorld Cup National | 2nd Place, FIRA RoboWorld Cup International | 1st Place, HappyHacks II | Developer of the Year, Game of Apps | CyberTitan Platinum Division

Languages

English (Native) | French (Fluent, DELF B2)
